An introduction into Data Mining in Bioinformatics. Bioinformatics deals with the storage, gathering, simulation and analysis of biological data for the use of informatic tools such as data mining. Zaki, Karypis and Yang (p. 1, 2007) discuss informatics as being the handling science of biological data involving the likes of sequences, molecules, gene expressions and pathways. BOL: Data Mining in Bioinformatics Data Mining for Bioinformatics enables researchers to meet the challenge of mining vast amounts of biomolecular data to discover real knowledge. In other words, you're a bioinformatician, and data has been dumped in your lap.
