speaking, a Green's function is an integral kernel that can be used to solve differential  
equations from a large number of families including simpler examples such as ordinary  
differential equations with initial or boundary value conditions, as well as more difficult  
examples such as inhomogeneous partial differential equations (PDE) with boundary  
conditions. cuDNN Developer Guide :: Deep Learning SDK Documentation This document  
includes math equations (highlighted in red) which are best viewed with Firefox version 4.0 or  
higher, or another MathML-aware browser. There is also a PDF version of this document.  
Equations of motion - Wikipedia In physics, equations of motion are equations that describe the  
behavior of a physical system in terms of its motion as a function of time. More specifically, the  
equations of motion describe the behaviour of a physical system as a set of mathematical  
functions in terms of dynamic variables: normally spatial coordinates and time are used, but  
others are also possible, such as momentum ... Negative resistance - Wikipedia In electronics,  
negative resistance (NR) is a property of some electrical circuits and devices in which an  
increase in voltage across the device's terminals results in a decrease in electric current  
through it.. This is in contrast to an ordinary resistor in which an increase of applied voltage  
causes a proportional increase in current due to Ohm's law, resulting in a positive resistance.
