**MATHEMATICS OF CLIMATE MODELING** - *Mathematics Of Climate Modeling (FREE)* Climate models use quantitative methods to simulate the interactions of the important drivers of climate, including atmosphere, oceans, land surface and ice. They are used for a variety of purposes from study of the dynamics of the climate system to projections of future climate.. Greening of the Earth and its drivers | Nature Climate Change Numerical weather prediction - Wikipedia Some meteorological processes are too small-scale or too complex to be explicitly included in numerical weather prediction models. Parameterization is a procedure for representing these processes by relating them to variables on the scales that the model resolves. For example, the gridboxes in weather and climate models have sides that are between 5 kilometers (3 mi) and 300 kilometers (200 mi ...
